Dr. Richard Brown  
Assistant Vice President  
Hammervill Paper Company  
Erie, Pennsylvania

Dear Dick:

This is to confirm our telephone conversation of Tuesday, July 23, 1968, during which you indicated that replacement of the line carrying the spent pulping liquors from your storage tanks to well No. 3 has still not been replaced and subsequently, well No. 3 has not been placed back in operation. During our conversation, you indicated that you are presently using wells No. 1 and 2 and that you are able to inject between 80 and 100% of your spent pulping liquors daily into wells No. 1 and 2.

Because your wells No. 1 and 2 cannot be operated to continuously accept 100% of the spent pulping liquors produced daily at your plant, we will expect to receive a time schedule of steps you plan to take to replace the line carrying spent pulping liquors to well No. 3 and the subsequent return of well No. 3 to operation. This time schedule must call for replacement of deep disposal well No. 3 in operation in the minimum time possible, and we will expect to receive the time schedule of steps you plan to take on or before August 6, 1968.

During our telephone conversation you also inquired as to a possible joint meeting with representatives of the City of Erie and the Hammervill Paper Company and representatives of our Central Office and I concerning the proposed joint treatment project. I will let you know as soon as possible when such a meeting could be held.

Very truly yours,

WCB:dj
